

# Introducing a new AI Agent I developed as part of my professional development.

The Zapier platform offers many templates to work with. As my first experiment, I used the Multi-Article Summarizer. For this example, Google Drive and Google Docs are the two main sources for inputs and outputs.

## AI Agent Overview:

This agent automatically summarizes content from links in a document, generating a comprehensive summary in a Google Doc.

## Benefits of the Multi-Article Summarizer template:

This agent efficiently gathers and summarizes information from multiple sources using an automated template. Extracting links from a document and summarizing their content saves time and provides a comprehensive overview without the need to visit each site individually. This solution is ideal for quickly understanding and compiling information from various sources into a single, easy-to-read document.

How the template operates:

The template utilizes an AI assistant to summarize content from links within a provided document.

When a summary is requested, the assistant:

- Reads the document added as a data source.
- Extracts all the links from the document.
- Visits each link to retrieve and summarize the content.
- Compiles an overall summary of all the content.
- Generates a Google Doc with the comprehensive summary.

This process delivers a clear and organized overview of multiple sources, facilitating easy understanding and review of the information.

Here is what the AI Agent structure looks like:

The screenshot displays the Microsoft Copilot Agents interface. On the left is a sidebar with navigation options: '+ New agent', 'My agents', 'Shared with me', 'All activity', 'Pods' (with a sub-item 'Content Agents'), 'Free plan' status, 'Activities' (0/400), an 'Upgrade' button, and links for 'What's new', 'Data usage', 'Support', 'Manage cookies', and the user 'YB Yves Bourgeois'. The main area is titled 'Multi-Article Summarizer' (Not Published) with a 'Configure' button. It shows the agent's configuration:

- Trigger:** Set to 'On Demand'.
- Instructions to follow:** A list of five steps: 1. Read the document provided as a datasource using 'Add knowledge source'. 2. Extract all the links contained in this document. 3. For each link: - Visit the website. - Summarize the content found on each website. 4. Once all sites have been summarized, generate an overall summary that consolidates all insights into a cohesive overview. 5. Create a new Google Doc with this comprehensive summary using 'Google Docs: Create Document From Text'. A note at the bottom says 'Use [?] to add to tools & knowledge sources'.
- Tools this agent can use:** Includes 'Default Tools: Visit Site & Web Search' and 'Google Docs: Create Document From Text' (with sub-options 'Drive: My Google Drive' and 'Export Formats: DOCX').
- Knowledge sources:** A list of four Google Drive documents: 'AI to Find My Perfect Job Match.docx', 'AI to transform my job search.docx', 'fastest growing companies in los angeles county 2025', and 'Recruiting\_with\_AI.docx', each with a 'Synced' timestamp.

At the bottom, there is a 'Copilot AI beta' badge and an 'Agent Preview' button.

Here is what the Agent Configuration looks like:

I understand. I'm ready to execute the workflow. However, I need you to clarify which document you'd like me to summarize.

Looking at the available data sources, I can see:

- AI to Find My Perfect Job Match.docx
- AI to transform my job search.docx
- fastest growing companies in los angeles county 2025
- Recruiting\_with\_AI.docx

**Which document would you like me to process?** Once you specify, I'll:

1. Extract all links from that document
2. Visit each website and summarize the content
3. Create a comprehensive consolidated summary
4. Generate a new Google Doc with the complete summary

Please let me know which document to start with.

COMPREHENSIVE SUMMARY: AI IN JOB SEARCH AND LOS ANGELES TECH ECOSYSTEM 2026

Executive Summary

This comprehensive report consolidates insights from four source documents and eleven external websites, providing a complete overview of how AI is transforming job search strategies and highlighting the thriving Los Angeles technology ecosystem. The analysis reveals that AI-powered job search methodologies are significantly more effective than traditional approaches, while Los Angeles has emerged as a major tech hub with over 375,000 tech professionals and 500+ companies.

=====

PART 1: SOURCE DOCUMENT SUMMARIES

=====

DOCUMENT 1: "AI to Find My Perfect Job Match"

Key Findings:

- AI analysis of 8 company job postings identified top 3 best-fit positions with detailed scoring (1-10 scale)
- Top match: Senior Manager, GTM Transformation (9.5/10) - Perfect alignment with GTM strategy and AI integration expertise
- Second match: GTM Strategic Planning, Senior Manager (9.0/10) - Leverages financial modeling expertise
- Third match: Staff AI Analytics Product Manager (8.5/10) - Exceeds requirements with 10+ years analytics experience

Key Insights:

- AI delivered a comprehensive 20+ page report ranking all positions with match scores and identified gaps
- Provided tailored application strategies for each opportunity
- Highlighted competitive advantages: AI integration, \$306M revenue impact, 60% YoY growth, Fortune 500 leadership
- Saved 10+ hours of research compared to traditional job searching
- Provided objective, data-driven rankings preventing wasted effort on poor-fit positions

Methodology:

1. Upload resume to ChatGPT/Claude
2. Request analysis against multiple job postings

Reply

After reviewing the output, the agent asks you to approve the output generated:

The future of work in Los Angeles is collaborative, innovative, and increasingly powered by AI—but human judgment, authenticity, and real-world impact remain the ultimate differentiators.

### WORKFLOW COMPLETION SUMMARY

✅ TASK COMPLETED SUCCESSFULLY

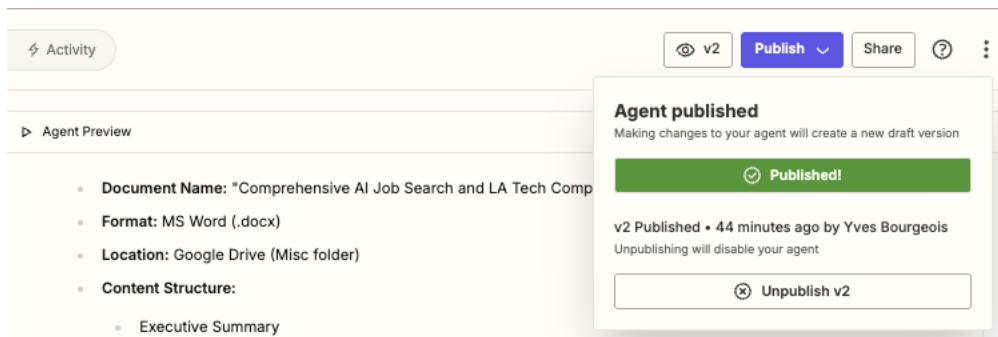

**What Was Done:**

- Read All 4 Source Documents:**
  - AI to Find My Perfect Job Match.docx
  - AI to transform my job search.docx
  - fastest growing companies in los angeles county 2025
  - Recruiting\_with\_AI.docx
- Extracted and Visited 11 External Links:**
  - Built In LA - Top Tech Companies (6,057+ companies)
  - Nucamp - Top 10 Tech Companies to Work for in LA 2025
  - Wellfound - Top Tech Startups in Los Angeles
  - Y Combinator - Los Angeles Startups (123 companies)
  - Plus 7 additional resource links
- Created Comprehensive MS Word Document:**
  - Document Name:** "Comprehensive AI Job Search and LA Tech Companies Summary 2026"
  - Format:** MS Word (.docx)
  - Location:** Google Drive (Misc folder)
  - Content Structure:**
    - Executive Summary
    - Part 1: Source Document Summaries (4 documents)
    - Part 2: Website Summaries (11 websites)

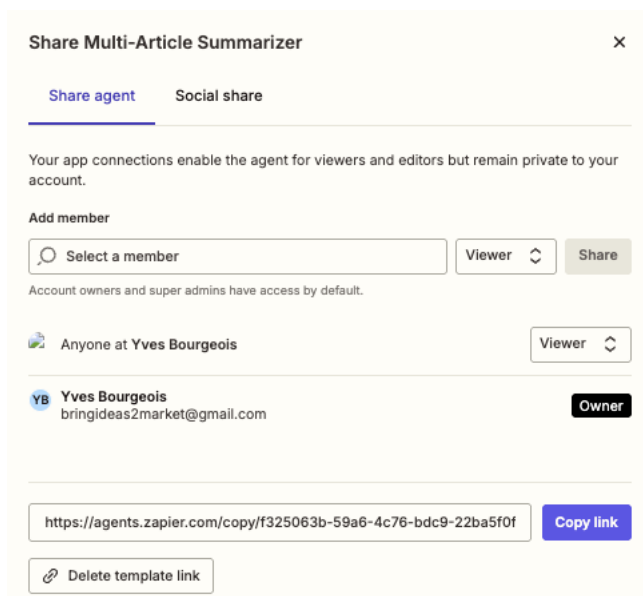

The last step is to publish your new AI agent:

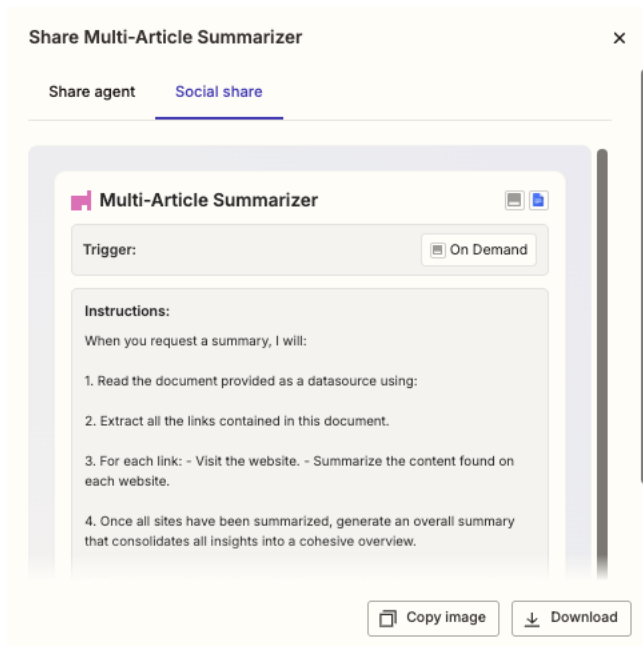

Zapier will notify you upon the completion of the publication:

Zapier allows you to share your AI agent with other members on the platform:

Or copy an image of the agent of social media:

The workflow does not work perfectly. Despite requiring an MS Word output format, the agent defaults to HTML. You must specify the MS Word format again when the agent asks you which documents to process. Overall, the AI agent works very well and saves the output to my personal folder on G-Drive.
